

The Burden of Diabetes in Connecticut

Diabetes is an epidemic in the United States. According to the Centers for Disease Control and Prevention (CDC), over 38 million Americans have diabetes and face its devastating consequences. What's true nationwide is also true in Connecticut. Obesity is linked to up to 53 percent of new cases of type 2 diabetes each year. Treating the chronic disease of obesity can help prevent, delay, and even result in diabetes remission.

Connecticut Diabetes Epidemic

- Approximately 312,000 adults in Connecticut, or 10.8% of the adult population, have diagnosed diabetes.
- Every year, an estimated 17,000 adults in Connecticut are diagnosed with diabetes.

Connecticut Obesity Epidemic

- Approximately 883,300 adults in Connecticut, or 30.6% of the adult population, have obesity.

Diabetes is expensive:

Americans with diabetes have medical expenses approximately 2.6 times higher than those who do not have diabetes. And the total estimated cost of diagnosed diabetes in the U.S. in 2022 was \$412.9 billion, including \$306.6 billion in direct medical costs and \$106.3 billion in reduced productivity attributable to diabetes.

In 2017 it was estimated that:

- Total direct medical expenses for diagnosed diabetes in Connecticut was \$2.69 billion.
- Total indirect costs from lost productivity due to diabetes was \$960 million.
- Total cost of diabetes was \$3.6 billion.

Obesity is expensive:

Americans with obesity had related medical care costs of an estimated \$173 billion in 2019. Having obesity more than doubles an individual's health care costs and out-of-pocket cost for care.

- A person with obesity or overweight with employer-provided health insurance had an average of \$12,588 in total yearly health costs, compared to \$4,699 for those without overweight or obesity.
- In 2021, a person with obesity with employer-provided health insurance faced an average of \$1,487 in out-of-pocket costs, compared to \$698 for those without obesity.

To aid the efforts of improving lives, preventing diabetes, and finding a cure:

In 2024, the National Institute of Diabetes and Digestive and Kidney Diseases at the National Institutes of Health invested \$7,315,224 in diabetes-related research projects in Connecticut.

The Division of Diabetes Translation at the CDC provided \$943,716 in diabetes prevention and educational grants in Connecticut in 2022.
